

K1608

Brida: 160mm

Longitud: 800mm sin brida

Anchura: 240mm

Airflow max.: 1150m³/h

Airflow opti.: 880m³/h

Incluye pre-filtro: K1708

Peso: 12.2Kg

Carbón activo: 9.9Kg

The Prima Klima Industry Line premium carbon filters are characterised by a remarkably high durability and an incomparable odour adsorption. The filters are refillable and have a 4cm deep bed of first quality, highly activated CTC75 carbon with a surface > 1200 m²/g. This ensures an exceptionally long contact time between air and carbon, which is highly effective for removing odours. High-quality metal press parts provide maximum stability and durability. The extra-long flange provides a secure connection.

Recommended ventilators: PK160-A, PK160-L, PK160-2, PK160-TC

Features:

- *High durability*
- *Effective particle adsorption and odour removal*
- *4cm deep bed of highly activated carbon*
- *Optimal contact time*
- *Refillable*
- *High quality metal parts*
- *With pre-filter against dust*
