

N 27

Liquid nitrogen fertilizer

This product contains 27% nitrogen (N), of which 7% NO_3 , 7% NH_4 , and 13% NH_2 .

The importance of nitrogen should be a well-known fact for all cultivators. Nitrogen is quantitatively speaking the most important fertilizer as it is, e.g. the primary substance of proteins (amino acids) and chlorophyll. Furthermore, nitrogen appears in the chromosomes (nuclei), DNA and vitamins. It also plays a significant role in the plant's osmotic regulation.

A deficiency of nitrogen manifests itself in the fading of the biggest leaves and a too early blooming. An excess results in dark green leaves and a slow growth.

It is of great importance that when nitrogen is used as a fertilizer, the appropriate form is used.

Bio Nova offers a very powerful liquid nitrogen fertilizer. This product is one of the various well-known Bio Nova liquid mineral fertilizers.

N 27 is mixable with all fertilizers.

N 27 is absorbed immediately, works effectively, and is economic.

N 27 regulates the pH of the medium used for cultivation.

A dosage of 1:1000 increases the total amount of N by 16.5 mmol and 0.3 mmol Mg.

DOSAGE:

In case of a severe nitrogen deficiency add to a maximum of 10 ml per 10 liters of nutrient solution.

As a supplement during the growing period add 2,5-10 ml/10 liters.

Note that when you are already using one of Bio Nova's main fertilizers an extra application of nitrogen is not necessary.
