

## Fish·Mix™

### What is Fish·Mix™?

Fish·Mix™ enables substrates to stimulate bacterial flora and accelerate growth. It is an infusion of organic fish emulsion from the North Sea mixed together with extract of Dutch sugar beet. Fish·Mix™ boosts growth of all living organisms in the substrate, as well as improving and stimulating production of microorganisms and useful bacteria in every type of soil and coco-based substrates.

Poor quality soil is transformed into rich and fat soil after a few days of use, providing plants with natural minerals.

### How to use Fish·Mix™?

Every grower who has his plants outdoors can use Fish·Mix™. Fish·Mix™ can be used from the second week of the growing period, during the flowering period till the harvest.

Do you want to combine Fish·Mix™ with your All·Mix®? Then we advise to use a dose of 1ml per litre of water. When using Light·Mix® we can advise a dose of 2-4 ml per litre water. Follow our grow schedule for the best results.
