

CANNA Phosphorus (P20%)

CANNA Phosphorus influences the bloom and the secondary metabolites and can in addition directly be absorbed by the plant due to its liquid form.

CANNA Phosphorus is the perfect product for stimulating the bloom or cure the phosphorus deficiency of the plant. It is an essential element that plays a major part in the plant's energy system.

User Instructions

This mineral fertiliser contains 20% P₂O₅.

Phosphorus is an essential element for the plants. It plays a leading role with the energy balance. Furthermore, it has an influence on the bloom and on the secondary metabolites.

The plant can immediately absorb liquid phosphor fertiliser.

Application

- To be applied as a phosphor fertiliser, amongst others, in the case of a phosphorus deficiency.
- As a supplementary remedy to stimulate the bloom.

Dosage

Dilute 10-20 ml concentrate per 10 litre of water (1:1000/1:500).

Warning

A good fertiliser contains all essential elements in the correct proportions. An overdose of phosphor can result in potassium, calcium and other trace element deficiencies. Therefore, proceed with caution when determining the dose; an overdose could be harmful to the plant!
