

CANNA Potassium (K20%)

You can optimally improve the quality and the quantity of the blooming top by using CANNA Organo Potassium. This organic product makes the cell wall stronger and in addition increases the resistance. CANNA Organo Potassium improves the bloom, the production of proteins and carbohydrates. Also, it improves the water management and the transport of water and nutrients in the plant.

This fertiliser should not be mixed with magnesium and fertilisers containing calcium. As potassium fertiliser it can be used for example when there is a potassium deficiency. As a supplementary nutrient it can serve to stimulate the blooming phase.

User Instructions

This organic mineral fertiliser contains 20% K₂O and is chloride free. Potassium is an essential element for the plants; potassium plays, amongst others, a role to stimulate bloom, the production of proteins and carbohydrates, the water balance and the transport of water and nutrients in the plant.

Potassium can be immediately absorbed by the plant, fortifies the cell tissue, increases the resistance and promotes the quantity and the quality of the flower. Potassium in concentrated form cannot be mixed with fertilisers containing calcium and magnesium.

Application

- To be applied as a potassium fertiliser, amongst others, in the case of a potassium deficiency.
- As a supplementary remedy to stimulate the bloom.

Dosage

Dilute 10-20 ml concentrate per 10 litre of water (1:1000/1:500).

Warning

A good fertiliser contains all essential elements in the correct proportions. An overdose of potassium can result in calcium and magnesium deficiencies and in acidification of the root environment. Therefore, proceed with caution when determining the dose; an overdose could be harmful to the plant!
