

## CANNA Trace Mix

CANNA's TRACE MIX consists of several trace elements that are essential for the development of your plants. These trace elements are used for several enzyme systems and therefore have an influence on the development of plants. TRACE MIX is a mineral fertiliser, which is extremely suitable as a supplementary nutrient to stimulate the growth and bloom of plants. Besides that it can serve to reduce the deficiency of trace elements.

### User Instructions

This mineral fertiliser contains various trace elements (0.06% Fe (containing the organic layers DTPA&EDDHA which prevent oxidation), 0.07% Mo, 0.06% Cu, 0.6% Mn, 0.3% B and 0.3% Zn). Trace elements are essential for the plants. They are used by several enzyme systems. This means they affect the energy balance, the overall development of the plant and the microscopic processes in the plant. With the exception of fertilisers containing concentrated calcium, liquid trace element mix can be combined with most fertilisers. The plant can immediately absorb liquid trace element mix.

#### Application

- To be applied in the case of a trace element deficiency.
- As a supplementary remedy to stimulate the growth and bloom.

#### Dosage

Dilute 10-20 ml concentrate per 10 litre of water (1:1000/1:500).

#### Warning

A good fertiliser contains all essential elements in the correct proportions. Proceed with caution when determining the dose; an overdose could be harmful to the plant!
