Hesi Bloom-Complex for the flowering phase

Hesi Bloom Complex provides all the necessary substances to flowering plants for their extra needs during flowering.

Apart from the nutrition (nitrogen, phosphorus, potassium, magnesium, calcium, trace elements etc.), Hesi Bloom Complex has also been enriched with vital components (amino acids and vitamins) that stimulate the development of the plant in an optimal manner. **The result of this is an exuberant bloom!**

In addition, Hesi Bloom Complex contains a pH corrector.

The pH level of the feeding water is corrected to a slightly acidic value. The plant can absorb all the administered nutrients optimally around a slightly acidic value. Bloom Complex

contains no unnecessary ballast and is therefore fully absorbed by the plant. The trace elements have been

stabilized in organic complexes. That is why they remain

available and stable at all pH levels, until they are absorbed by the roots.

Moreover, Bloom Complex contains two kinds of nitrogen: mineral and organic.

All of this apparently keeps the EC content low with high effectiveness and activity of the nutrients. This is the reason why you should not base the doses of

the HESI nutrition on EC values, which you are used to doing

with other supplement brands.

Therefore do not overdose!

Use: add to the feeding water during

the flowering phase.

Hesi Phosphorus Plus flowering amplifier

Hesi Phosphorus Plus is used in combination with the Hesi Bloom Complex in the second half of the flowering phase. During flowering, the plant develops an increased need for phosphorus and potassium. Using Phosphorus Plus, we give plants the right means at the right moment: phosphorus for extra formation of flowers and potassium for a fast transport to the flowers.

Hesi soil nutrition has been balanced to the ratios in the soil environment and ensures that the plants are taken care of in an optimal manner. Thanks to the use of high-quality ingredients, the plants absorb all substances offered to them, so that no residues are left behind.

With Phosphorus Plus the formation of the flowers is more powerful!

Use: add to feeding water in the second half of the flowering phase along with Hesi Bloom Complex

Dosage:
50 ml / 10 L

**YOU DON'T ACTUALLY
NEED ANY MEASURING
INSTRUMENTS FOR
BREEDING PLANTS IN
SOIL WITH HESI.**

**WHEN CULTIVATING
PLANTS IN SOIL, IT'S
ALSO BETTER NOT USE
ANY PH CORRECTORS**

HESIDEA!

Dosage:
25 ml / 10 L
