

Hesi Bloom Complex

[< Back](#)

HESI Soil Fertiliser - Bloom Complex for the flowering phase

HESI Bloom Complex provides all the necessary substances to flowering plants for their extra needs during flowering. Apart from the nutrition (nitrogen, phosphorus, potassium, magnesium, calcium, trace elements etc.), HESI Bloom Complex has also been enriched with vital components (amino acids and vitamins) that stimulate the development of the plant in an optimal manner. The result of this is an exuberant bloom! In addition, HESI Bloom Complex contains a pH corrector.

The pH level of the feeding water is corrected to a slightly acidic value. The plant can absorb all the administered nutrients optimally around a slightly acidic value. Bloom Complex contains no unnecessary ballast and is therefore fully absorbed by the plant. The trace elements have been stabilized in organic complexes. That is why they remain available and stable at all pH levels, until they are absorbed by the roots.

Moreover, Bloom Complex contains two kinds of nitrogen: mineral and organic. All of this apparently keeps the EC content low with high effectiveness and activity of the nutrients. This is the reason why you should not base the dosage of the HESI nutrition on EC values, which you are used to doing with other supplement brands.

Therefore do not overdose!

Composition:

NPK 3+3+4

Nitrogen N 3,0%, Phosphorus 2,6% P_2O_5 ,
Potassium 3,6 % K_2O . Other: magnesium, calcium,
sulphate and trace elements: iron, manganese, zinc,
copper, boron, molybdenum, plus vitamins
B1, B2, B6, plant sugars and amino acids.

Dosage: flowering plants: 50 ml / 10 Liter (+ up to 25ml Phosphorus Plus / 10 Liter)

Package sizes: 0,5 L / 1 L / 5 L / 10 L / 20 L

The pH corrector of HESI Bloom Complex is also active together with HESI Phosphorus Plus and shifts the pH in a slightly acidic range, it is optimal for the plant area.
