

Hesi

COCO

Fertilizer

Hesi Coco

Hesi Coco is THE supplement for flowering on coco substrates. Just like all the HESI supplements, Hesi Coco has been stabilized thanks to complex-binding substances and it is free of unnecessary ballast.

Hesi Coco is not an A & B supplement, the A+B components are united in one bottle.

Hesi Coco contains both organic and mineral nitrogen. All trace elements have been stabilized in protecting complexes and have been enriched with vitamins and other vital elements both for the flowering. This way, a perfect balance is created in the system and a fast build up of a healthy micro-flora is achieved. It is possible that the EC of Hesi Coco is somewhat lower than other coco supplements because no salts have been added, since this would only raise the EC and these would be of no nutritional value to the plant (ballast). It is therefore important that the maximum dose of 50 ml / 10 L is not exceeded.

Dosage:
50 ml / 10 L

Use: Add to feeding water.

IF YOU ONLY WANT A SHORT PERIOD OF GROWTH (E.G. ONE WEEK), YOU CAN USE A 30 ML / 10 L DOSAGE OF HESI COCO INSTEAD OF TNT COMPLEX.

Hesi PK 13/14

Plants have an increased need for phosphorus as well as potassium in the flowering phase, by applying PK 13/14 we completely fulfill this need. Hesi PK 13/14 should be used starting from the second half of the flowering phase up to one week before the end of the cycle.

PK 13/14 is balanced (see cultivation diagram coco or hydro) to Hesi Hydro Bloom and Hesi Coco.

For a complete description of PK 13/14, see page 9.
