

## CANNA Terra Professional Plus

CANNA Terra Professional Plus is the purest potting mix possible for plant cultivation. It also gives the best effects with CANNA TERRA nutrients. The formulation is specifically developed for indoor, grow-room situations. Of course, it also gives good results outside.

### Advantages of CANNA Terra Professional Plus

- CANNA Terra Professional Plus is composed of airy peat moss and types of tree bark that have an anti-septic action. They promote exceptional root development and the formation of thicker stems.
- Also, faster metabolism combined with low sickness rates ensure an increased production.
- The medium is pH-adjusted for long-term control with a lime charge large enough to last an entire cycle. It has a mineral-nutrient starter charge that adjusts the initial level of nutrients up to a good beginning charge, correcting the ratios to work perfectly with CANNA TERRA nutrients.
- The special structure provides optimum amounts of air and water in the medium.
- CANNA Terra Professional Plus contains trace elements and chelates, which protect the plants during growth.

Loosen the CANNA Terra Professional Plus and fill the pots, compressing the medium slightly. Add water until a little begins to drain through and then place the plant in the CANNA Terra Professional Plus.

### Watering

Depending on the size of the pot, growing conditions and the plant's growth stage, adjust the amount of water given to the needs of the plant in question. Under normal conditions, adult plants evaporate 4-6 litres of moisture a day, per m<sup>2</sup>.

For larger plants, use 5 litre pots or larger. The larger the pot, the more constant the root environment will be. Make sure that there's sufficient drainage; you may want to place a thin layer of hydro-granules in the bottom of the pot for air and drainage.

The plastic packaging material of CANNA Terra Professional is 100% recyclable.

- Store in a cool dry place
- Do not expose to temperatures below 4°C
- Bag contents 25L & 50L
