

TML - The Missing Link®

The ultimate Flowerbooster

This premium product from Bio Nova laboratory, protects plants from damaging external influences, it stimulates the plant's natural defence system and demonstrably increases the yield.

The Missing Link consists of a great number of special trace elements that have become essential for the growth and flowering of any living creature on this planet as a result of a process of millions of years of absorption and release by plants and animals, composting, re-absorption, microbe activities etc.,

Nowadays people cultivate all sorts of crops in our over cultivated environment. They disregard the needs of crops, and often disrespect the laws of nature. These facts lead to deficiencies, which result into a great number of plagues and diseases among, not only animals and plants, but also human beings. Moreover, as a result of deficiencies of these essential nutrients, organisms are no longer able to fully develop themselves.

The administration of these indispensable nutrients leads to an unprecedented positive effect on both the quality and the yield of treated crops. This product fills the hole in the foodchain which had not been discovered before.

Justifiably this product can be called **The Missing Link**.

The Missing Link can be used in combination with **BN X-ceL**. This forms an ideal combination during the growing and flowering period.

DOSAGE:

Its usage is easy. **TML** in a 1:2000 dosage (5 ml. per 10 liters) continuously or weekly in a 1:500 dosage in a single feed. As a spray: 1:1000 (1 ml. per litre) solution. Over dosage is impossible.

TML should be applied from the first week of growth until the final week of flowering.

TML is mixable with all fertilizers.
