The TRIMPRO ORIGINAL is an effective and very quiet leaf trimmer. It is used to remove excess leaves and twigs from different types of plants and flowers such as rosemary, oregano, basil, mint, lavender, coriander and parsley as well as in preparation for the extraction of essential oils and mixed flower clippings for potpourri.

Its tempered steel blade makes a clean cut without damaging the plant. The Trimpro Original is equipped with a leaf recovery system and can be quickly disassembled for easy transportation.

For trimming, take a branch of a freshly harvested plant in your hand and move it over the grate with a back-and-forth motion while rotating the plant at the same time.
