item code atami\_janeco\_lightmix

Atami Janeco Lightmix is an ideal base substrate on which almost every crop can be grown. The lightly fertilized earth has the advantage that the somewhat 'more difficult' plants will not become over-fertilized quickly. In addition to a light dose of fertilizer Atami Janeco Lightmix also contains perlite, making the substrate sufficiently airy and also creating an optimum water management. When growing on Atami Janeco Lightmix there is sufficient nutrition available for the first 2-3 weeks. After this period Atami advises to add liquid fertilizer to the crop for optimal results. Atami Janeco Lightmix is an ideal substrate for cuttings/clones.
