The new TRIMPRO ROTOR has been designed and developed at the request of end users who are looking for yet another gentle and efficient Trimpro quality product. Employing leather fingers to circulate your flowers over our non-stick grate, the leaves are trimmed by our razor sharp tempered steel blades. Built at an angle, emptying the Rotor is as simple as swinging the latch to open the door and your perfectly trimmed flowers gently exit the upper cylinder, all while the machine is still running so production is non-stop. As with all our machines, the blade height is adjustable to meet every preference.

For trimming, separate the fresh flowers from the branches, put them into the upper container of the trimmer and let the Rotor do the rest
