

ENFORCER LARGE SUPER SPREADER

The Enforcer Super Spreader is simple, yet it is an incredibly effective tool. There is a common misconception that the Super Spreader blocks light. The Super Spreader does exactly the opposite – it creates a wider more even light spread, removing hot spots and cold corners. The Super Spreader lets the user place the light closer to the plant canopy in order to maximise the use of power. The Super Spreader reduces heat at plant level by at least 5°C. Not only that, this genius tool will increase your yield with less lights and let you grow right through summer!

The Enforcer Super Spreader has an aluminium surface that reflects and redirects light in a selective 4-way pattern for fantastic results.

The Enforcer Super Spreader comes in two sizes – Medium and Large and will work with both the Enforcer and Avenger models.
