

Bio Bloom

For all growing methods: hydroponics and soil

Bio Bloom is a growth and bloom activator

- One of its specialties is to carry the nutritive elements in the plant, favouring the parts that are most deprived. By securing a balanced nutritive delivery, it increases its power of absorption and growth by more than 20%.
- In soil, it activates the micro organisms, thus stimulating the flow and intake of nutritive substances.
- It increases the size of the leaves and improves the photosynthesis process.
- It particularly enhances the assimilation of Calcium.
- Bio Bloom stimulates flowering, as good assimilation increases natural immunity and allows better resistance to disease. Your crops will be healthier and your harvests more abundant.

Bio Roots, Bio Bloom and Bio Protect exist in 30 ml, 60 ml, 0,5 l, 1 l et 5 l

How to use Bio Bloom?

Add Bio Bloom, along with the nutrients, to your solution. Follow the instructions on the labels and read the nutritive programs for each of our nutrients.

When to use Bio Bloom?

Use Bio Bloom during the flowering stage of your plant, in hydroponics and soil.

Which are the advantages of Bio Bloom?

Bio Bloom guarantees a balanced distribution of the nutritive elements. It is a growth activator with immediate action on the flowering and fruiting development of the plants

When will I see the results?

Very quickly, after only a couple of days, you will notice a clear improvement in the health and strength of your plants, their growth rate, the quantity of flowers and fruit produced, and the generosity of your crops.

Why use Bio Bloom?

Bio Bloom is an inexpensive 100% organic product compared to its strong concentration, the quantities needed, and the efficiency of its action.
