

The Neutralizer Compact Kit

TNCK 220

The Neutralizer Compact Kit is a combination of a perfect mix of natural essential oils and The EME 220(Electronic Molecule Evaporator).

The Neutralizer is a highly elaborate and secret formula of essential oils. Thanks to its patented system of heat transbmission, The EME achieves and maintains the exact temperature required in order to evaporate The Neutralizer at a constant rate and in a controlled manner. It therefore manages to transform our secret blend of essential oils into volatile particles which are capable of neutralising a myriad of foul odours.
